Re: Reed College ETC and Library Projects

Oregon Air Reps recently had the opportunity to work with Hunter Davisson on the Reed College ETC and Library Projects. As HVAC equipment suppliers we were initially involved with Hunter Davisson's design/engineering department and found their team to be extremely professional and willing to listen to suggestions and alternate ideas. The HVAC equipment for this project was selected with both performance and efficiency as a top priority. As the project progressed, we were involved with Hunter Davisson's project manager as well as their field personnel. Again, we found detail oriented people with a common goal of completing the project on schedule and commissioning the mechanical systems to operate at peak efficiency. Hunter Davisson's attention to detail throughout all phases of construction helped facilitate a very successful project.

Sincerely,

Kurt Schultheis
Sales Engineer
